

VSE Aviation Services is an FAA/EASA Part 145 Repair Station with state-of-the-art facilities capable of supporting both new generation and classic commercial and cargo aircraft. In addition to traditional T&M MRO services, we offer many different levels of support with programs tailored to each customer's specific requirements.

We specialize in the following repairs for commercial, cargo and military aircraft:

- High-flow/High-temp pneumatics
- Fuel accessories
- Electrical and electronic accessories
- Avionics
- Instruments
- Crew Seats
- Interiors
- Galleys
- O2 systems
- Cargo systems
- Waste systems
- Composites

Our facilities house fully-automated test equipment capable of performing many tests, including:

- Starter cycle, overspeed and PAWL liftoff tests
- Starter full vibration monitoring and reporting
- High temp & high flow components
- Vacuum chamber capable of simulating pressure at altitude
- Pneumatic static bench with proof test capable of up to 2000 PSI with 2" supply lines
- Fuel main accessories testing of pumps, boost pumps, fuel controls, VSV actuators, pressure switches and fuel flow transmitters

VSE Aviation Services also carries a large inventory of rotatable components to support our repair operations and fulfill industry demand.
